

Prime Wetland Candidates with Tax Parcels Hampton Falls, NH October, 2007

This is an overview of the mapped prime wetlands. The required spatial mapping accuracy to delineate the wetlands is +/- 100 feet. The accompanying tax parcel overlay is of unknown accuracy, but matches fairly well with the 2005 orthorectified air photos (by Sanborn). The spatial accuracy of the parcels varies by location.

The data on this map is provided for general reference purposes. It should be understood that, upon approval of these mapped prime wetlands, site specific detailed mapping is required before development for areas within the vicinity of these mapped wetlands.

2007 Parcels

Prime Wetland Complexes

COMPLEX

- 1-Dodge Ponds Complex, 73.5 acres
